

Django Training – Lesson 1 Quick Exercise Answers

1. What is a Model?

A Model is a Python class that defines the structure of your data and maps directly to a database table.

2. What is a View?

A View is a Python function or class that receives a request, processes data, and returns a response (HTML, JSON, etc.).

3. What is a Template?

A Template is an HTML file that displays data received from a View, using variables, loops, and conditions.
